linkedin.com/in/suraj-prakash-verma
github.com/surajprakashverma

SKILLS

Programming Languages

Python, Java, C, C++, SQL

Web & Backend Development

Spring Boot, Flask, Fast API, REST APIs, Microservices, Kafka, web Methods, Software AG

AI/ML & Data Science

Machine Learning, Deep Learning, NLP, LLMs, RAG, Lang Chain, Lang Graph, Transformers, TensorFlow, PyTorch, scikit-learn, Pandas, NumPy

Databases & Cloud

MySQL, PostgreSQL, MongoDB, AWS Basics, Docker

Tools & Others

Git, GitHub, Linux, Postman, VS Code, Jupyter Notebook, Colab, IntelliJ IDEA

EDUCATION

B.Tech – Computer Science & Engineering
Shershah Engineering College,
Sasaram
2019–2023 | CGPA: 8.24/10

CERTIFICATIONS

- Mulesoft Developer-SalesForce
- Spring Boot — JSpiders, Bengaluru

ACHIEVEMENTS

- Completed 20+ Machine Learning and Deep Learning projects covering supervised learning, deep learning, NLP, Generative AI, RAG, and agentic workflows.
- Built multiple practical GenAI and RAG-based applications using modern LLM frameworks.
- Strengthened problem-solving, system design, API integration, and automation skills.

INTERESTS

Generative AI | System Design
Open Source | Tech Blogging | Cricket

PROFESSIONAL SUMMARY

Software Developer and AI/ML Engineer with 3+ years of experience in enterprise application development, data integration, automation, and Generative AI. Experienced in Python, Java, web Methods, REST APIs, Machine Learning, Deep Learning, NLP, LLMs, RAG, Lang Chain, Lang Graph, Fast API, and intelligent-agent workflows. Builds practical solutions that connect reliable backend engineering with AI-driven automation.

PROFESSIONAL EXPERIENCE

UST Global | Kochi, India

Software Developer I | Apr 2024 – Present

- Develop and support enterprise applications for global clients, focusing on data integration, automation, system modernization, and reliable business workflows.
- Implement and maintain backend services and REST APIs using Python and Java, including request processing, validation, exception handling, and integration with enterprise systems.
- Design and support data pipelines, XML/JSON transformations, microservices, and cloud-oriented processing components for application integration and automation.
- Collaborate with cross-functional teams to analyze requirements, troubleshoot defects, perform testing, and support deployment of scalable software solutions.
- Contribute to AI/ML and Generative AI initiatives using LLMs, RAG, NLP, Lang Chain, Lang Graph, and MCP concepts to prototype intelligent-agent workflows.

KEY PROJECTS AT UST GLOBAL

AIPharmacist (Generative AI)

- Developed an AI-powered assistant for medicine information, dosage guidance, drug interactions, and general healthcare queries using LLMs and RAG.
- Implemented document ingestion, vector search, retrieval pipelines, and a conversational interface for grounded responses.
- Focused on safety, accuracy, and reliable information retrieval from trusted sources.

Enterprise Automation & Data Processing

- Built automated data-processing pipelines for enterprise data and repetitive operational workflows.
- Worked on XML/JSON transformation, mapping, validation, and error handling across integration processes.
- Developed internal tools to improve operational efficiency and reduce manual effort.

TECHNICAL PROJECTS

OnePostLnkdn

Python, Lang Graph, Lang Chain, LLMs, Fast API, LinkedIn integration

- Built a multi-agent content automation workflow that reads a roadmap document or PDF and divides it into day-wise topics.
- Generated LinkedIn posts for each topic and routed drafts through an email-based review and approval process.
- Published approved content through LinkedIn integration, reducing repetitive manual content preparation.

PratAI

Python, LLMs, Lang Chain, APIs, email automation

- Developed an AI news-digest workflow that researches current AI developments and reviews candidate stories.
- Curated the top 7–10 AI news items, formatted concise digest, and automated delivery through email.
- Combined research, filtering, summarization, and notification steps into a repeatable workflow.

AT Asset Cleanup Utility

Python, XML processing, web Methods Software AG Active Transfer

- Created a Python utility to clean and prepare Active Transfer asset-export XML files for controlled reuse.
- Removed unrelated asset content, user references, certificates, and dependency blocks from generated cleanup files.
- Preserved the original export and produced a separate cleaned output for safer operational use.

PROFESSIONAL DEVELOPMENT

- Regularly learn and build projects in Generative AI, LLMs, and system design.
- Stay updated with research papers, open-source tools, and modern AI frameworks.
- Explore real-world applications for AI in healthcare, education, automation, and enterprise integration.
