AI/ML Engineer

TECHNICAL SKILLS

Languages: Python, Java, SQL, C, C++

AI/ML: Machine Learning (ML), Deep Learning (DL), NLP, LLMs, RAG (Retrieval-Augmented Generation), LangChain, LangGraph, Transformers, TensorFlow, PyTorch, scikit-learn

MLOps & Data: MLOps, Model Deployment, Model Evaluation (Precision/Recall, A/B Testing), Data Engineering, Pandas, NumPy

Cloud & Backend: AWS, Docker, MySQL, PostgreSQL, MongoDB, Spring Boot, Flask, FastAPI, REST APIs, Microservices, Kafka

Security: Security Implementation, Authentication/Authorization, Data Encryption

PROFESSIONAL EXPERIENCE

UST Global | Software Developer | April 2024 – Present

- Built backend services and REST APIs using Python and Java.
- Designed RAG (Retrieval-Augmented Generation) pipelines and LLM-based agents using LangChain and LangGraph.
- Managed model deployment and MLOps workflows, including CI/CD pipelines and production monitoring on AWS.
- Performed model evaluation using precision, recall, and A/B testing to verify performance.
- Implemented security protocols for API endpoints and data handling.
- Designed data pipelines and performed XML/JSON transformations for system integration.
- Deployed and monitored microservices on AWS using Docker.
- Applied system design principles to build scalable backend components.
- Fixed system defects and wrote unit tests to maintain code quality.

KEY PROJECTS

AIPharmacist (Generative AI)

- Built a healthcare assistant using LLMs and RAG (Retrieval-Augmented Generation) for drug interaction guidance.
- Developed document ingestion and vector search pipelines.
- Defined the problem as semantic search and question answering; designed the pipeline and evaluation metrics for answer relevance.
- Communicated project results to stakeholders by focusing on productivity gains and source citations rather than model internals, saving 130 hours per engineer annually.

OnePostLnkdn (AI Agents)

- Created a multi-agent workflow using LangGraph to automate content generation.
- Built prompt engineering templates and integrated an email-based approval workflow.

AT Asset Cleanup Utility (Data Engineering)

- Wrote a Python utility to automate the cleaning of XML-based Active Transfer exports.
- Improved data processing efficiency by removing unnecessary dependency blocks.

PratAI (AI/ML)

- Developed an automated AI news-digest tool that researches and summarizes AI developments.
- Automated delivery of curated digests via email workflows.

EDUCATION

Bachelor's degree in Computer Science & Engineering, Shershah Engineering College (2019–2023)

CERTIFICATIONS

Mulesoft Developer (SalesForce), Spring Boot (JSpiders)

- Currently pursuing AWS Certified Machine Learning Engineer certification*
